

Marcus Wexley

Lead Data Specialist

marcus.wexley@example.com · +1 555-0137 · Bristol, UK · DOB: 24 Dec 1985

SUMMARY

Lead data specialist with a long track record of turning messy operational records into trustworthy reporting that teams actually rely on. I enjoy mentoring analysts and untangling the kind of legacy pipelines that everyone else has given up on.

EXPERIENCE

Lead Data Specialist — Harrowgate Insight Partners Bristol, UK	Dec 2022 - Present
Lead a small team responsible for the integrity of the company's core reporting platform, setting standards for validation and lineage. I own the relationship with downstream stakeholders and translate fuzzy business questions into reliable, repeatable datasets.	
Principal Data Engineer — Pellmire Analytics Group Reading, United Kingdom	Jan 2020 - Oct 2022
Rebuilt a brittle batch reporting estate into a tested, well-documented pipeline that finance and operations could finally trust. I also introduced a review process for new data sources that cut recurring quality incidents substantially.	
Senior Data Engineer — Crowthorne Data Labs Manchester, United Kingdom	Oct 2016 - Nov 2019
Designed and maintained ingestion processes feeding the customer analytics warehouse, working closely with product teams on event tracking. I mentored two junior engineers and led the migration away from a fragile hand-rolled scheduler.	
Data Engineer — Vauntley Information Systems Leeds, UK	Feb 2014 - Aug 2016
Built reporting datasets for the commercial team and acted as the go-to person for reconciling figures across disparate source systems. I documented previously tribal knowledge so the team could onboard new starters without weeks of hand-holding.	
Business Intelligence Developer — Brennick Quantitative Services Chicago, United States	Sep 2011 - Feb 2014
Developed dashboards and curated datasets for a fast-growing operations group, partnering with analysts to define consistent metrics. I helped retire a sprawl of conflicting spreadsheets into a single agreed source of truth.	
Junior Data Analyst — Tindlewood Reporting Co.	Jun 2008 - Aug 2011

SKILLS

- CI/CD (Gitlab, Jenkins)
- MySQL
- Communication
- Jira
- Python
- Agile Scrum
- Linux
- Confluence
- Nginx
- C

English (Native)

CERTIFICATES

Certified Data Quality Practitioner May 2022
Enterprise Data Stewardship Track

PREFERENCES

Contract · Temporary

Sheffield, UK

Produced regular operational reports and investigated data discrepancies for the support and logistics teams. This is where I learned how much careful validation matters before anyone makes a decision from a number.

PROJECTS

Site Telemetry Consolidation Platform

Led the data workstream for a platform that pulled equipment telemetry from dozens of construction sites into a single analytical store. My focus was defining the canonical schema and the validation rules that kept noisy field readings from corrupting downstream reporting.

Tech: Unity, .NET 6, Agile Scrum, ASP.NET 4.5+

Learner Progress Data Hub

Built the data layer behind a hub combining course engagement and fulfilment records for an online learning provider. I designed the reconciliation logic that married learner activity with shipment and access data so the team could report on outcomes end to end.

Tech: Haskell, ASP.NET 4.5+, Sql

EDUCATION

BSc in Computing and Information Systems

2004 - 2007

Aldermere University of Technology, Nottingham, Uzbekistan
