SKILLS

- TypeScript
- Docker
- Gitlab
- Confluence
- Linux
- CI/CD (Gitlab, Jenkins)
- Agile Scrum
- Microsoft SQL
- .NET

LANGUAGES

English (Native), German (B2),
Russian (C1)

PREFERENCES

On-site, Remote · Full-time

SUMMARY

Manual QA with over a decade of experience finding the defects that automated checks miss. I enjoy exploratory testing and building a deep mental model of how a product is actually used, then pushing on the edges. Over the years I have grown into a senior role where I shape test strategy and mentor newer testers.

EXPERIENCE

Senior Manual QA Engineer — Saulriets Quality Labs Nov 2023 - Present
Riga, Latvia

Own the manual test strategy for a complex enterprise product and lead exploratory testing across major releases. Built a structured regression suite that gave the team confidence to ship on a tighter schedule. Mentor junior testers and act as the quality gatekeeper for high-risk features.

Manual QA Lead — Pavasaris Testing House Nov 2021 - Sep 2023
Riga, Latvia

Coordinated manual testing across two product teams and standardised how defects were reported and triaged. Introduced session-based exploratory testing that surfaced several severe issues before release. Worked closely with developers to shorten the feedback loop on bug fixes.

Manual QA Engineer — Ledus Software Assurance Aug 2019 - Nov 2021
Riga, Latvia

Tested web and desktop applications across many releases, focusing on usability and edge-case behaviour. Wrote clear, reproducible defect reports that developers consistently praised for saving time. Helped define acceptance criteria during planning to head off ambiguity early.

Quality Assurance Specialist — Rudens Digital Quality Mar 2018 - Aug 2019
Jelgava, Latvia

Ran manual test cycles for a logistics product and validated complex data-driven workflows. Built a reusable library of test scenarios that cut the time to prepare each release. Partnered with support to turn recurring customer complaints into targeted test coverage.

Junior QA Tester — Zieme Verification Studio Sep 2016 - Jan 2018
Riga, Latvia

Executed test plans and logged defects for a small team building internal business tools. Grew comfortable with exploratory testing and started owning whole feature areas. Learned to write precise reproduction steps that reduced back-and-forth with developers.

Riga, Latvia

Supported senior testers by running scripted test cases and verifying bug fixes. Built early foundations in defect tracking and structured reporting. Progressed quickly from following test plans to suggesting improvements to them.

PROJECTS

Heavy Machinery Training Simulator QA

Led manual verification for a training simulator used by both a university programme and a heavy-machinery manufacturer. Designed exploratory test charters around realistic operator workflows, uncovering timing defects that scripted tests had missed. The structured reporting helped developers prioritise fixes ahead of a critical demonstration.

Tech: MySQL, C++, C, ASP.NET, Avalonia

Supply Chain Dashboard Validation

Owned manual testing for a supply-chain management dashboard handling large volumes of live operational data. Built scenario-based checks that caught subtle calculation errors in the reporting views before they reached customers. Coordinated closely with the development team to verify each fix end to end.

Tech: Blazor, Python, Jira, Html

EDUCATION

BSc in Software Engineering

2009 - 2013

Riga College of Software Quality, Riga, Latvia

Professional Diploma in Software Testing

2007 - 2009

Kurzeme Institute of Technology, Liepaja, Latvia

Foundation Certificate in Information Technology

2004 - 2007

Vidusupe Academy of Computing, Riga, Latvia
