EXPERIENCE

Junior System Administrator — Chirchik Systems House

Jul 2025 - Present

Tashkent, Uzbekistan

Support day-to-day infrastructure for a growing services company, handling user accounts, backups, and routine server maintenance. I monitor system health, document recurring fixes into runbooks, and escalate the trickier incidents with clear context. This is my first full-time role and where I am building hands-on operations habits.

PROJECTS

Resort Operations Server Backbone

Set up and maintained the on-premise servers for a hospitality IT solution serving several resort properties. I configured services for reliability, scripted routine maintenance, and kept the booking backend available during peak periods. The hardening work reduced unplanned downtime across the pilot sites.

Tech: iOS Development (Swift, Objective-C), C, Golang, .NET

Campus Secure Access Initiative

Administered systems and access controls for a platform shared by schools and law offices, with a strong focus on data protection. I tightened authentication policies, segmented sensitive data stores, and ran regular integrity checks. The improvements closed several gaps flagged in an internal review.

Tech: .NET, Microsoft SQL, NoSql, Cyber Security

DevPortal Hosting Environment

Maintained the hosting environment for an internal developer portal used by a software team and a property group. I managed the database layer and web services, automating restarts and routine health checks. My monitoring setup caught capacity issues before they reached users.

Tech: Postgresql, JavaScript, React

EDUCATION

Bachelor of Science in Computer Engineering

2020 - 2024

Zarafshan Polytechnic Institute, Tashkent, Latvia

Diploma in Network Administration

2017 - 2020

Oqtosh Technical College, Samarkand, Uzbekistan

SKILLS

- Confluence
- Sql
- Communication
- Linux
- Python
- Ansible
- Microsoft SQL
- Perl
- Postgresql
