EXPERIENCE

Senior Frontend Developer — Brightloom Interface Labs Austin, US	May 2024 - Present
I lead frontend architecture for a customer-facing analytics suite, owning the component library and the patterns the rest of the team builds on. A big part of the role is mentoring two mid-level engineers and steering technical reviews so we keep the codebase consistent. I also partner closely with design to make sure what ships actually matches the intent.	
Frontend Engineer — Halcyon Pixel Works Denver, USA	Jul 2022 - May 2024
Built and maintained the web client for a subscription commerce product used by tens of thousands of shoppers. I drove a migration off an aging stack onto a modern component model, which cut our build times and made onboarding faster. I owned accessibility work and helped set the team's testing conventions.	
UI Developer — Northgate Cascade Systems Seattle, US	Oct 2020 - May 2022
Worked on dashboards and configuration screens for an internal operations platform. My focus was untangling a sprawling state-management layer into something predictable and easy to reason about. I collaborated with backend engineers to redesign the contracts between our services and the client.	
Junior Frontend Developer — Meridian Quill Software Portland, United States	Sep 2018 - Aug 2020
My first software role, building screens for a content management tool and fixing a steady stream of UI defects. I learned how to read a design spec, ask the right clarifying questions, and ship reviewed code on a regular cadence. Over time I took on small features end to end and started reviewing peers' pull requests.	

PROJECTS

Shelfwise Storefront Refresh
A ground-up rebuild of the storefront experience for a consumer goods retailer, focused on speed and a cleaner browsing flow. I owned the interface work and coordinated tightly with merchandising and support stakeholders to keep everyone aligned. The result was a noticeably faster catalog and far fewer checkout drop-offs. Tech: JavaScript, Communication
Tenant Cloud Console

A self-service console that lets property managers provision and monitor their cloud-hosted units. I built the frontend that surfaced complex provisioning state in a way non-technical operators could follow. It bridged several backend services behind a single coherent interface.

Tech: Traefik, Xamarin/MAUI, Rust, ASP.NET

EDUCATION

Bachelor of Science in Human-Computer Interaction	2013 - 2017
--	-------------

Cascadia Polytechnic University, Portland, Germany

HOBBIES

Long-distance trail running, restoring vintage synthesizers, and weekend pottery.
