

Dietmar Kellinghaus

Lead Quality Assurance (QA) Engineer

dietmar.kellinghaus@example.com · +1 555-0165 · Dortmund, Germany

SUMMARY

Lead QA engineer with more than two decades of hands-on testing across enterprise platforms and distributed teams. I specialize in building durable test strategies, coaching junior testers, and turning flaky pipelines into trustworthy quality gates. I care most about shipping software that behaves the same in production as it did in review.

EXPERIENCE

Lead Quality Assurance Engineer — Hollerbach & Strane Systems Dortmund, Germany	Jan 2022 - Jan 2026
Owned the end-to-end quality strategy for a multi-tenant billing platform and led a team of nine testers. Introduced risk-based test planning that cut escaped defects significantly and stabilized a previously brittle release pipeline. Mentored engineers on exploratory testing and defect triage.	
Senior QA Engineer — Marblefield Digital Works Tashkent, Uzbekistan	Aug 2018 - Nov 2021
Coordinated cross-border testing efforts between regional offices and the core product team. Designed regression suites for a logistics tracking product and reviewed automation coverage before each milestone. Acted as the quality liaison for stakeholder demos.	
QA Analyst — Quillward Software Collective Samarkand, Uzbekistan	Apr 2015 - Aug 2018
Validated complex workflows for an order-management product spanning several user roles. Built reusable test data sets and documented edge cases that fed directly into the developer handbook. Partnered closely with support to reproduce field-reported issues.	
Test Engineer — Brennholt Technical Group Cologne, Germany	May 2011 - Mar 2015
Executed functional and integration testing for a document-processing suite used by large clients. Helped establish the first formal bug lifecycle and severity rubric for the team. Reduced re-test cycles by clarifying acceptance criteria with product owners.	
Software Tester — Vesperline Interactive Hamburg, Germany	Jun 2007 - Mar 2011
Performed manual verification of release candidates for a consumer scheduling application. Tracked defects through resolution and verified fixes against original reproduction steps. Contributed checklists that shortened onboarding for new testers.	
Junior QA Tester — Aldermoor Computing Bureau Essen, Germany	Aug 2004 - Jun 2007
Supported senior testers in validating desktop utilities and recording reproducible defect reports. Learned structured test-case authoring and basic smoke-testing routines. Maintained the shared archive of test evidence and screenshots.	

SKILLS

- TypeScript
- Linux
- Docker
- CI/CD (Gitlab, Jenkins)
- Confluence
- Jira
- Python
- JavaScript
- Rust
- Java
- PHP

LANGUAGES

English (Native), Uzbek (Intermediate), Russian (Native)

PREFERENCES

On-site, Hybrid

HOBBIES

Restoring vintage radios and competitive orienteering on weekends.

PROJECTS

Portfolio Risk Analytics Rollout

Acted as business analyst for a phased deployment of a portfolio risk reporting tool at an investment firm. Translated trader and compliance requirements into clear acceptance criteria and validated automated provisioning of the reporting environment. Bridged the gap between operations staff and the engineering team to keep the rollout on schedule.

Tech: Ansible, Laravel

EDUCATION

Diploma in Software Engineering

2001 - 2003

Rheinwald Polytechnic Institute, Bochum, Germany
